SGS INDIA

C.P. BATH FITTINGS

Creating Bathroom Culture

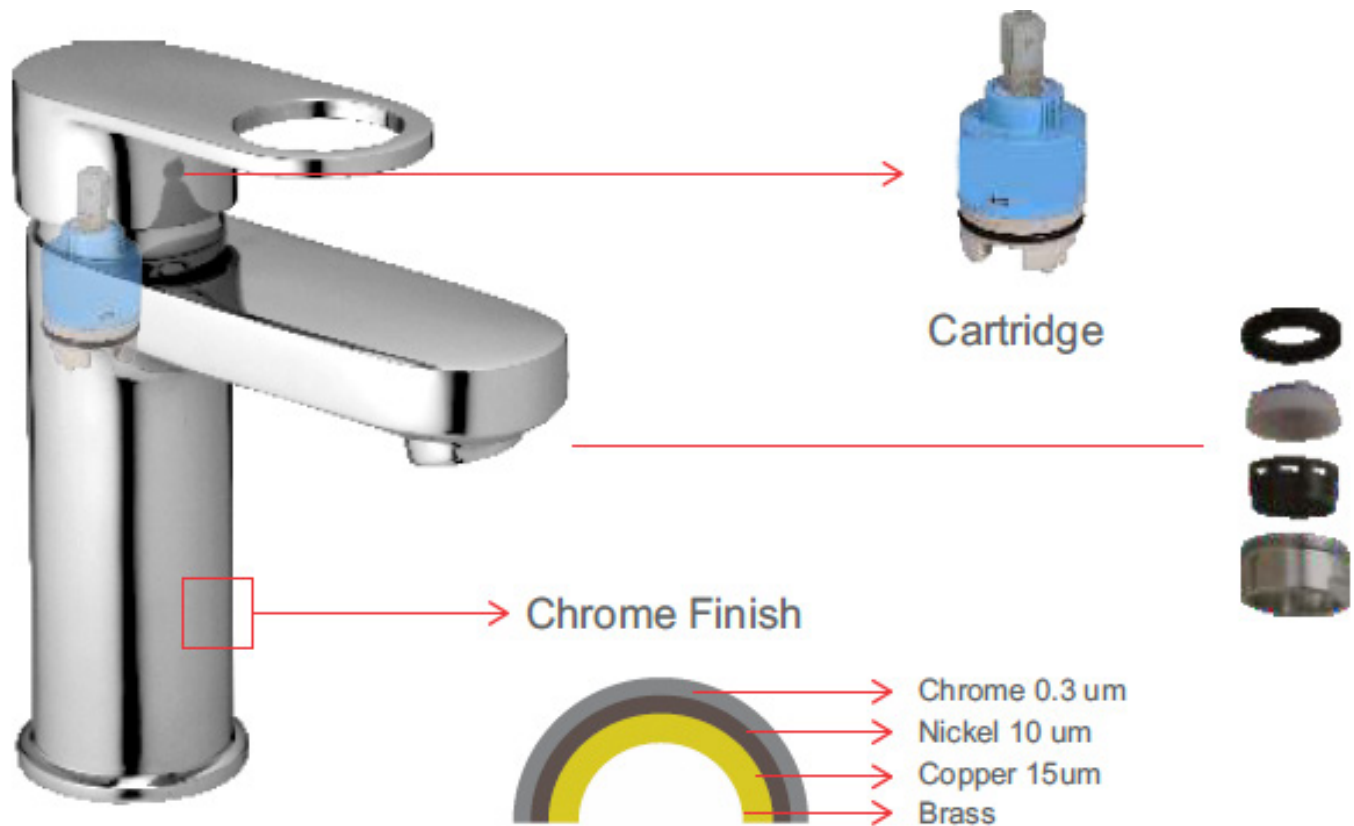

A bathroom is an intimate where function and emotional design work in harmony, creating a personal oasis and acting as private centerpiece to your home.

With the changing time, the definition of bathroom has changed altogether. SGS INDIA Bath Fittings has explicitly understood this change, and that's the reason for SGS INDIA Bath Fittings entry to provide a touch of class of bathrooms, With a mere decades experience it has made a worldwide presence and ushered in a new era of converting bathrooms into glamour room by not only offering the latest but the very best in bathroom fittings. The company is vastly circulating its series of SGS INDIA Brand in the market-a series that is enduring, exquisite and ravishing. The company has a dedicated team of proficient and dedicated workforce determined to produce refreshing ideas in the form of bathroom fittings. It is therefore the ultimate choice of interior decorators, builders, architects, consultants and of course most crucially of..... The lady of the house.

Working : A faucet is a device for delivering water from a plumbing system. It consists of the following components : Spout, handle(s), lift rod, cartridge, aerator, mixing chamber, and water inlets. When the handle is turned on, the valve opens and controls the water flow adjustment under any water of temperature condition. The faucet body is usually made of brass, though diecast zinc and chrome.

Cartridge : Cartridge faucets have a hollow metal cartridge insert that seals against the spout of faucet body. Depending on how a series of holes in the cartridge align with the stem, water is mixed and controlled. Drips usually mean the cartridge needs replacing. Cartridge faucets are referred to as “washerless” because they control flow using methods other than a washer and valve seat (though they do have O-rings and seals to prevent leaking). We make a washerless single-handle faucet with a hollow brass cartridge insert that seals against the inside of the faucet body with O-ring. Water flow is controlled by an up-and-down movement of the cartridge; to change water temperature, you just rotate the handle.

Aerators : We use supreme quality of Aerators which prevent splashing shaping the water stream coming out of the faucet spout, to produce a straight and evenly pressured stream. Water conservation and reduction in energy costs Reducing faucet noise

Chrome Finish : Upper shiny protection layer provides a mirror finish to every faucet. High plating thickness (Nickel : 10 microns and chrome : 0.3 microns) provides tolerance to extreme climate and water condition. 400 + hours of self spray test ensures our finishes are highly durable and corrosion resistant for a much longer duration.
